

Appl. No. 09/784,765  
Amdt. Dated September 7, 2004  
Reply to Office Action of May 6, 2004

SPECIFICATION AMENDMENTS

Please replace the paragraph beginning at page 5, line 1,  
with the following amended paragraph:

The processing of the message is, in particular, a format conversion - which is known per se but can be selected in a specific manner in the context of the invention - for example conversion from the HTML format to the WML format for transmitting messages from the Internet to a mobile radio network. A further conversion process, which can be actuated, comprises translation into a different language and adding supplementary information in the different language. Such language conversion can be actuated, in particular, as the result of logic processing of a source IP address and the dialing-in point when this results in the user who is dialing in being identified as being a foreigner and it is possible to form an association with his (supposed) mother tongue. A further useful conversion for a range of applications is the conversion of an addressed IP address, for example for the purposes of relaying, for server bypassing or in conjunction with the calling of a Web Call & Session Center.
